April:

Attached is the spreadsheet with the method reporting limits.

The answers to the questions are:

- (1) Is your laboratory (ALS Laboratory) running all of the analytes listed under each specific method (e.g., all herbicides and pesticides)?

Except for TPH >C12 to C35, all the analytes specified in the QAPP are reported by the laboratory. TX1005 has an option for either C12-C35 or C12-C28 and C28 – C35 and the laboratory is reporting the C12-C28 and C28 – C35 ranges. There are a few differences between chemical names in the QAPP and the laboratory reports; these are noted on the attached tables.

- (2) What are the laboratory's method reporting limits? If Excel tables are available with this information, that would be very helpful.

The tables with the laboratory method reporting and detection limits are attached.

Please call or email if you have further questions.

Thanks

Brenda

Subject: U.S. Oil Recovery Project (Task Order 144) - Request for Information on Sample Analysis

Hi Brenda,

I am the project manager with EA Engineering and was given authorization by Raji Josiam with EPA to contact Pastor, Behling & Wheeler, LLC concerning a couple of questions we have associated with the U.S. Oil Recovery site sampling. Matt Wickham provided me your contact information. If you could please answer the questions below, I would greatly appreciate it:

- (1) Is your laboratory (ALS Laboratory) running all of the analytes listed under each specific method (e.g., all herbicides and pesticides)?
- (2) What are the laboratory's method reporting limits? If Excel tables are available with this information, that would be very helpful.

Thank you,

April
